Education

B.Sc in computer science

Ben Gurion University

2021

Languages

english — Fluent

hebrew — Native/Bilingual

IDF Service

Golani Sabotage & Engineering Unit

08/2013 – 08/2016

- Led a team during missions, demonstrating responsibility & leadership
- Maintained discipline, consistently meeting demanding physical & mental standards.

Professional Experience

KoiosTech

Software Engineer

08/2023 – 09/2025

Developed data-driven tools, microservices, and AI-powered pipelines for analyzing investor chatter and delivering actionable insights to clients

- Designed and operated Dockerized workloads orchestrated via Airflow on **AWS (EC2, S3, ECR)**, including writing, deploying, and configuring **Linux** shell scripts to automate log cleanup and maintain system reliability on production servers.
- Expanded the company's web-scraping data sources by integrating **YouTube via the YouTube API**, enabling extraction of new, highly relevant chatter signals.
- Developed a **Near-real-time** (hourly updates) that identified spikes or drops in positive/negative sentiment, generating alerts on significant market-moving sentiment shifts.
- Improved the web platform's **responsiveness and cross-device usability**, enabling full functionality on mobile and tablet and expanding user accessibility beyond desktop.
- Built an **AI-driven summarization microservice** that analyzes large-scale investor chatter and automatically extracts trending topics, improving insight quality for clients.

Skills

infrastructure & DevOps

Docker, AWS (EC2, S3, ECR), Airflow, Git, Linux, Kafka, RabbitMQ,

Programming & Scripting

Python, Node.js, TypeScript, JavaScript

Backend & Microservices

REST APIs, Express.js, MVC architecture, Microservices, Web-scraping pipelines, API integrations (YouTube API, Twitter/X API, Reddit API, StockTwits API, OpenAI API)

Frontend

React, Material UI (MUI), Responsive UI development

Projects

coachAI

A SwiftUI-based personal health assistant that analyzes food, workouts, and chat inputs using GPT and stores structured logs in Firestore to help users track nutrition and fitness progress.

- Designed and implemented structured JSON interactions with GPT to automatically extract nutrition macros, workout details, and chat guidance, enabling accurate tracking and personalized recommendations.
- Implemented user authentication, data models, and CRUD operations ensuring secure, real-time synchronization across the app.
